A methodology based on HACCP
principles and scientific literature

Independent
Reviewed by independent
committees of technical experts
of different disciples of the chain

The **GMP+ FC scheme** consists of elements with mandatory requirements. However, we offer support through our **Feed Support Products**. They are **generic tools** and provide information to help you implement **your company specific HACCP system**. Get the most out of Feed Support Products by applying them to your specific HACCP system.

Product list

List of accepted feed materials that can be produced and traded within the GMP+ chain.

Risk Assessments

Generic proces descriptions of accepted feed materials, including hazards and control measures. For every accepted feed material a generic risk assessment is available.

Specific feed safety limits

One composite list with the maximum permitted values of undesirable substances in feed.

Hazard reports

A draw up of all hazards in a feed that consists of multiple feed materials.

Fact sheets

The fact sheets show background details regarding the hazards and the severity of the risk to animals and humans. Fact sheets are available for the undesirable substances (hazards) in the Risk Assessments and for processing aids.

Monitoring database

Analysis results of many years with regard to undesirable substances of all types of feed.
