Welcome

This Feed Certification Scheme document helps you to provide feed safety worldwide. By meeting the requirements set by GMP+ International together with our GMP+ Community, we aim to help you get the feed certification you need. Please read the information in this document carefully.

Let's make this work together!

1. Introduction

This standard is a stand-alone document which includes requirements for guaranteeing the safety of feed and food transport via inland waterway shipping and short sea shipping. This document has been approved by the Dutch Government as a Guide to Good Practice for Inland Waterway Transport. The Dutch 'Inland Waterways Guide to Good Practice' consists of two parts. Part 1 contains the detailed statutory requirements. Part 2 (this standard) is a workbook which the carrier can use in practice when implementing the requirements of the Guide to Good Practice.

By applying this Code of Practice, Dutch companies demonstrate compliance with the requirements of Regulation (EC) no. 852/2004, Regulation (EC) no. 853/2004 and Regulation (EC) no. 183/2005.

In the context of GMP+ certification, the responsibility of the carrier undertaking the inland waterway transport is limited solely to (the service of) the inland waterway transport of feed.

1.1. Scope and Application of this document

The scope covers:

- All transport of: feed by ship via inland waterways¹, regardless of whether the transport takes place via an inland waterway vessel or a coastal vessel.

The scope does not cover:

- Transport that is not carried out via inland waterways. The ship is then considered a sea-going vessel, which means that it may be necessary to apply a different GMP+ scope.
- Activities with feed, other than transporting the feed by ship via inland waterways (for example storage and transshipment, affreightment). It may be necessary to apply a different GMP+ scope instead of, or in addition to, this document. For the exact details, see F 0.3 Scopes for certification.

The carrier must ensure that the safety of the feed products and services, covered under GMP+ certification, is not negatively affected by (feed and non-feed related) activities, processes, products or services which are not covered under the scope of GMP+ certification.

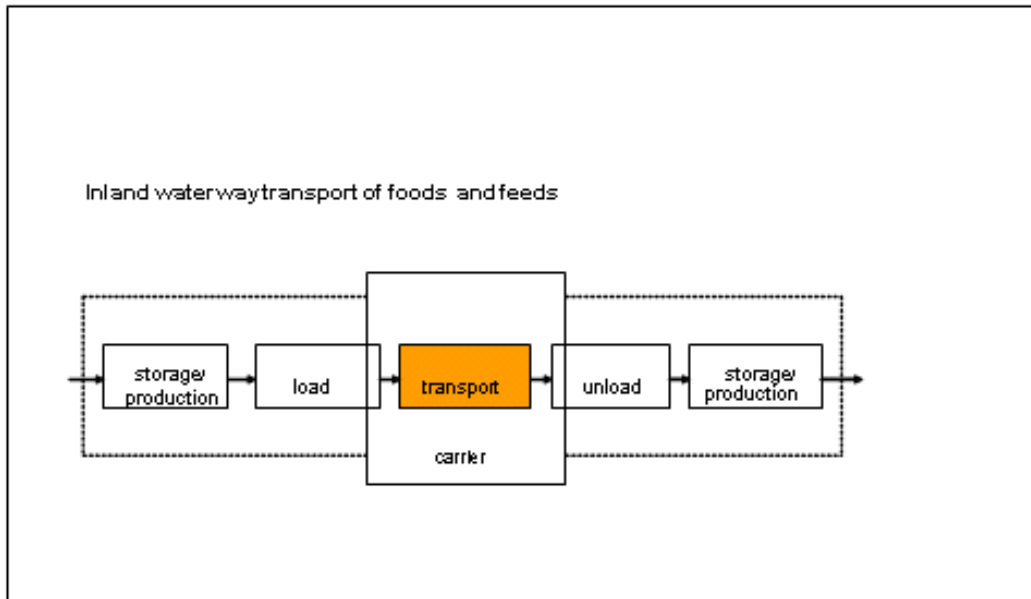

¹ All waterways within the state coastline, with exception of the through routes connecting a seaport with the sea.

Control measures, based on a HACCP analyses, must be implemented and monitored to ensure this. All activities potentially influencing feed safety must be available for inspection / auditing.

For the sake of legibility of this document reference will only be made to inland waterway shipping.

This refers to both inland waterway transport and transport by coastal shipping. Unless one of the two modes of transport is explicitly being referred to: then the terms "inland waterway transport" or "short sea shipping transport" will be used.

The requirements of this document apply to organisations, irrespective of their type or size, with activities which are covered within the scope of this document. It is not important whether these activities are on own account or as a (sub)contractor ('service provider').

Each carrier must identify, analyse and control the company specific feed safety hazards by applying HACCP principles. This document describes - as accurately as possible for activities or feed which are covered within the scope of this document, what the requirements are with respect to the various risks, and explains the associated control measures. A carrier may make these control measures part of a prerequisites programme, or may implement them as specific measures for controlling a particular Critical Control Point.

This standard also provides requirements for inspections and audits.

1.2. The structure of this document

This document is structured in a specific way. Chapters 1 and 2 contain more general information. Chapter 3 consists of part two of the Dutch “Inland Waterways Guide to Good Practice”. It also includes work plans, which a carrier must apply to demonstrate that he/she meets the requirements.

For the explanatory list of relevant terms and definitions see F 0.2 *Definition list*.

1.3. Exclusion of requirements

It is possible that certain requirements do not apply to a GMP+ certified company. A certified company may exclude these requirements. Exclusions must, however, be justified and recorded. The exclusions may, in any event, not lead to the participant supplying feed/food or offering services which do not comply with safety as defined in the GMP+ FSA Module.

Requirements may not be excluded because the certified company does not consider them to be relevant. For example, because customers do not ask for them, or because compliance with these requirements is not a legal obligation; or because the certified company considers itself too small.

1.4. Rules for certification

Within the framework of GMP+ TS 3.3 inspection, the inspector must verify if the loading compartment is in good technical condition and made of suitable materials which can be effectively cleaned and maintained to avoid contamination of food and feed. For this reason, for an inspection under GMP+ Short Sea Shipping and Inland Waterways Transport, a loading compartment must be empty before assessment.

2. What is HACCP

The HACCP system is a major foundation for this standard. HACCP stands for Hazard Analysis and Critical Control Points. In plain language this means: analyse the hazards for feed and food safety and control those hazards. Control means in this case that hazards are prevented or eliminated or are limited to an acceptable degree. Feed and food safety must be assured from cultivation to delivery to the consumer. Including during transportation by inland waterway vessel.

HACCP is part of the European Food Hygiene Regulation and the Feed Hygiene Regulation and has been included in the national legislation. This European Directive and the national legislation offer the possibility to draw up guides related to the safe handling of feed and food. These guides are intended for a complete sector or industry and are based on the principles of HACCP. The guides will be approved by the Government.

The HACCP obligation applies to every company which prepares, processes, handles, packages, transports, stores or transships, distributes or trades the above-mentioned products. Transport by inland waterway vessel also falls under this. The company makes its own decision about whether it works in accordance with an approved guide or sets up its own HACCP system. The Government is tasked with supervision in all cases.

The HACCP system is an feed and food safety system intended to assure feed and food safety. The system must systematically trace, remove or safely control the hazards. The responsibility of the carrier is limited to the transport of the batches involved. The client is also obliged to ensure safe transport of the above-mentioned products. The carrier will therefore require from him that a certified (ISO 17020 or equivalent) inspection company or own loading inspector of the company which issues the order for the transport is appointed to inspect the agreed guidelines of the Guide to Good Practice. For definition see F 0.2 *Definition list*.

What does it mean that there must be an examination of the hazards for feed and food safety?

As a start, the HACCP system demands an analysis of the hazards and the risks (Hazard Analysis) to feed and food safety which may occur in the event of transportation of the above-mentioned products.

The consumer is the focus of this. The product to be consumed must be safe. The use of contaminated or spoilage products can have serious consequences to public health and may lead to the carrier being held liable.

The danger of contamination and spoilage can be sub-divided into:

- a. Contamination: contamination due to the loading of different products together
- b. Contamination due to transport rotation: Transporting different products after one another
- c. Environment contamination: Contamination and spoilage due to unsatisfactory cleaning or maintenance, walking through the load, bird droppings, weather conditions (rain, snow), etc.
- d. Temperature rise: Spoilage due to heating up during transport as a result of overheating, faulty refrigeration, etc.

When analysing the above hazards attention must be given to three sorts of hazard namely microbiological, chemical and physical hazards. Some examples are:

- e. The presence of cleaning materials or chemical agents in the product being transported. For example because of the cleaning of the load compartments (cleaning water left behind) or through contamination by previous loads. This means that the loading compartment must be thoroughly inspected after every load and cleaned if necessary (corrective action). After each cleaning there should be a new inspection and each approval should be recorded in a form (Work Plan 2). Job instructions should be drawn up for the cleaning (Work Plan 5) indicating precisely how to clean. These activities should be recorded (Work Plan 14).
- f. A second example is the hazard from pest and the associated process of combating pest (by gassing for example). The storage temperature of certain goods may also, for example, form a hazard (growth of pathogenic micro-organisms). The corrective actions for this may be gassing (with a 'gas-free declaration') and the inspection and auditing of the environment (temperature, presence of pest).

The hazard analysis examines what the hazards are during the time when the carrier is responsible for the load. This is achieved by tracing and recording any possible hazards during the process of transshipment and transport. The hazard analysis for transportation by inland waterway vessel is part of the work plans of the Work Book of the Inland Waterway Guide to Good Practice. This analysis has already been carried out so that when using the Guide to Good Practice only the steps indicated in the guide have to be followed.

What are critical control points?

Critical control points are actions or process steps at which a hazard may occur for feed or food safety (for example not cleaning a load compartment properly). Once it has been determined where the critical points are located an assessment must be made of whether the established hazards to feed and food safety can be removed or controlled.

Firstly an attempt is made to prevent or remove these hazards. If this is not successful then control measures are used to reduce the hazard to an acceptable level. In all cases there is a 'Critical Control Point' (CCP).

The control of the process of transshipment and transport must be done per section via the established critical points. It will have to be established where the critical control points are located and which preventive actions must be taken. It must then be ensured that the process of transshipment and transport is controlled and can, if necessary, be adjusted. All the data must, of course, be recorded and documented.

A number of control measures are established during the whole transport process. These are all specified in the Work Plans 6, 7 and 8.

3. Work plans

3.1. Introduction

Feed and food are especially sensitive to contamination and pollution. The health of the consumer is at risk if products are not transported responsibly and hygienically. This chapter describes how products should be handled during loading and unloading.

Important general requirements are:

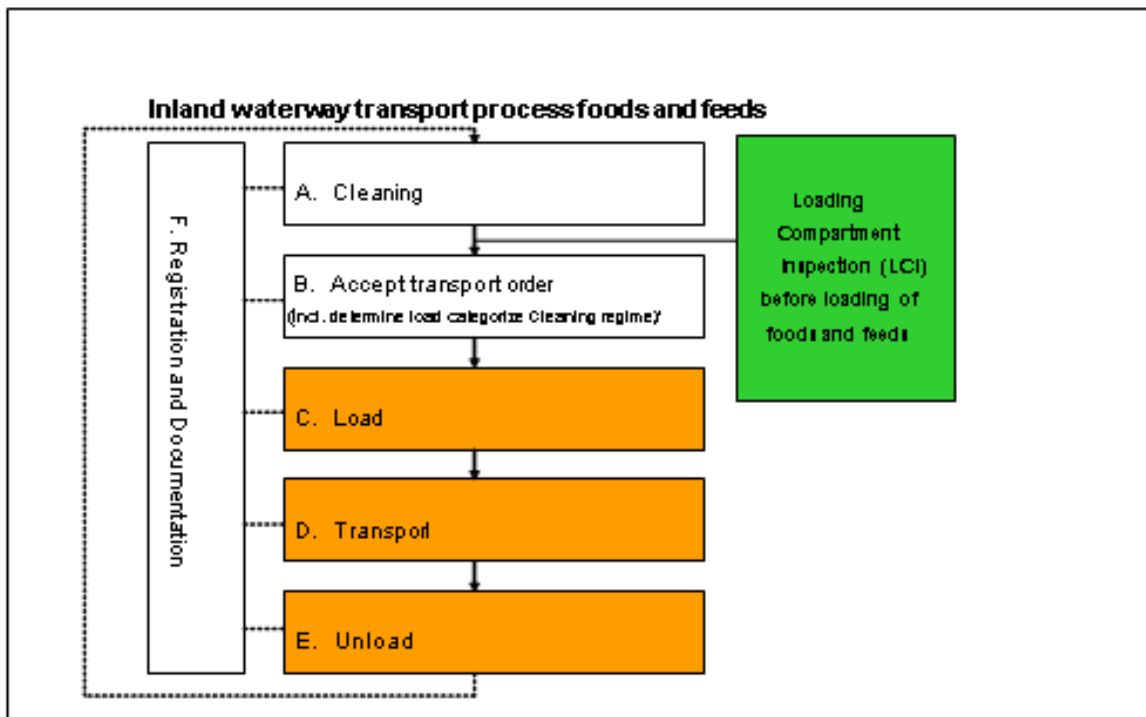

- a. Products may not be contaminated from outside (contamination by another load or contamination by a previous load).
- b. Products may not be put into a state where an unsafe situation may arise for feed or food (incorrect environment or incorrect temperature).

The work plans include the procedures which must be followed. A work plan has been drawn up for every situation. The work plans are sub-divided into three parts: **prevention, control and registration.**

Please note:

The mentioned work plans show which data must be recorded in writing. The carrier is allowed to use its own format of these work plans as long as all required data are recorded.

The transport process is simple and is as follows:

Three principles apply to the transport of food and feed:

1. **Prevent contamination** through **prevention**
2. **Work properly** by **controlling** the process
3. **Good administration** through **registration**

3.2. Prevention

How is feed and food safety assured during the transport process?

The Inland Waterways Guide to Good Practice is based on the use of work plans. In the structure of these work plans account has been taken of three types of vessel namely tanker vessels (mainly for liquid loads), dry-loading vessels and container vessels. The work plan to be used depends on the load. A distinction is made in the work plans between dedicated transport and non-dedicated transport. Dedicated transport means that the vessel is only used for the transport of food or food and feed. A number of hazards have been eliminated in advance in the event of dedicated transport.

As already stated in the introduction, a critical control point is a point at which a hazard for feed and food safety may occur and where control is necessary to prevent, eliminate or to control this hazard. All critical points which may occur in the transport process are included in the control and prevention items in the Guide to Good Practice work plans. If these work plans are used properly then feed and food safety is assured during the transport of the above-mentioned products.

Basic requirements:

The carrier must ensure that the vessel

- a. is made of suitable materials which can be effectively cleaned and maintained to avoid contamination of food and feed. This applies in particular to materials and surfaces which come into direct contact with food and/or feed;
- b. is in good technical condition;
- c. is in possession of proper facilities for the collection and storage of waste;
- d. is suitable for its intended use and functions in accordance with its intended use;
- e. makes good hygiene production and practices possible;

Moreover, the carrier makes sure that::

- f. preventive actions are taken against pest and. in the event of an actual pest problem, that a suitable pest control plan is drawn up and implemented;
- g. employees follow the instructions for general and personal hygiene;
- h. the loading compartments are clean, fully emptied, free of load remains and free of the odour of prior loads;
- i. the loading compartments are dry and/or dried in the event of dry subsequent loads;
- j. the loading compartments are covered, in as far as this does not harm the quality of the product.

Work Plan 1 - Dedicated transport

The first work plan is a work plan in which the possibility of dedicated transport is described. This means that the vessel involved transports either only food or only food, feed materials, compound feed and premixtures. If this vessel does not yet have this status but wishes to be eligible for it then the vessel should be shown to be suitable for dedicated transport by way of an external audit or inspection. In that, pay attention to the specific differences between tank transport and transport of dry cargo. Work Plan 1 is a statement that must be present on the vessel and which must be shown at the request of the auditing bodies.

Work Plan 2 – Loading Compartment Inspection (LCI)

Loading compartments should be constructed such that they can be cleaned properly and regularly. These compartments should be of good quality and well maintained. Pets and pest should be prevented from contaminating the products. When inspecting these loading compartments in advance use is made of Work Plan 2 (load registration form). The inland waterway carrier has the duty to report his previous loads on this form.

The client or the owner of the goods will have the loading compartments inspected before loading by an inspection company certified (ISO 17020 or equivalent) for that purpose or own loading inspector of the company which issues the order for the transport (manufacturer and/or trader).

Inspection company : company accredited in accordance with ISO 17020 with a specialisation in feed or grains or liquid agri-bulk and/or internationally operating in accordance with a recognised certification system such as ISO 9001: 2015 where the inspection of loading compartments is demonstrable mentioned as a part of the certified scope.

Own loading inspector : a loading inspector employed by a GMP+ certified participant. This is a position which is held by an employee who on the basis of training and experience has the knowledge and expertise to be able to inspect the load compartment for its suitability for loading with feed.

It is a legal obligation that this work plan is used and recorded for each load of food or feed. The carrier should of course meet the (additional) requirements set by the principal.

Work Plans 3, 4 and 5 - Hygiene and Cleaning

Requirements are set not only on the products themselves with respect to hygiene but also on the people who handle the products. They may come into contact with raw materials, semi-manufactured goods and end products and may therefore be a major source of contamination with micro-organisms. The carrier should ensure that the necessary hygiene and safety is taken into consideration on board.

Breakable attributes (for example glass) may not be used. Two work plans have been drawn up for hygiene on board namely Work Plan 3 (personal hygiene) and Work Plan 4 (general hygiene).

The loading compartments must be cleaned in accordance with the instructions (for feed see work plan 9b, Appendix 2). Registration of the cleaning takes place in accordance with Work Plan 14.

The material (such as materials used for sampling) which comes in contact with the products or which could do so must also be regularly cleaned. Cleaning agents and disinfectants should be so-called 'food grade' products. Work Plan 5 has been drawn up for the cleaning of loading compartments. Cleaning is a CCP.

Food grade: these are safe cleaning and / or disinfecting agents that can be used in the transport of products intended for the feed and / or food industry. The user should check this on the instructions for use of the product.

3.3. Control

How is feed and food safety made controllable during the transport process?

Work Plans 6, 7 and 8 - Loading, transporting and unloading

The products should be transhipped and transported in such a way that pollution and contamination is avoided. As stated above, the transport process consists of three steps where each step has specific critical control points. These critical control points are sufficiently controlled if they are properly controlled and registered. The following work plans indicate where the control points are located and they must be controlled. These plans are Work Plan 6 (loading), Work Plan 7 (transport) and Work Plan 8 (unloading). Contamination as a result of precipitation during loading and unloading is a CCP.

Work Plans 9 and 10 – Previous loads and prescribed temperatures

The established norms and limit values should be adhered to and account should be taken of the usual rejection limits as laid down in laws and contracts. Contamination from the outside (for example from another load) and damage caused by the product itself (for example due to incorrect temperatures) must be prevented. The following plans have been drawn up for this: Work Plan 9 (preparation of dedicated status and working with prohibited and unlisted loads), and Work Plan 10 (prescribed temperatures). Temperature recording is a CCP.

Work Plan 11 - Cargo Record Book

The carrier is responsible for the registration of the loads. Registration can take place in a cargo record book. Transported loads can be effectively traced through the registration of loads and any particular details. Work Plan 11 contains an example of a loading journal.

Work Plan 12 – Protest letter

The carrier is responsible for any contamination of the goods which may mean a hazard to feed or food safety during transport. The carrier may submit a protest if there are no expert auditors available and make this known to his clients. [Work Plan 12](#) is an example of such a protest letter.

Work Plan 13 – Handling complaints

The carrier is responsible for the corrective actions to be taken in the event of non-conformities. The corrective actions are specified in Work Plans 6, 7 + 8. A major part of the corrective actions is the handling of both internal and external complaints. The complaints can be processed by using a [complaints registration form](#) Use is made in the Guide to Good Practice of a complaints registration form. [Work Plan 13](#) is an example of a complaint registration form.

3.4. Registration

How is feed and food safety registered and verified during the transport process?

The areas of responsibility must be described. All agreements must also be recorded in writing. With respect to transport by inland waterway, the carrier is responsible for the safe transport of the feed and food goods. All documentation is recorded in accordance with the work plans 14 and 15 (registration, documentation and verification). Work Plan 16 handles the after-care of the system. Control of the total system is assured if the carrier makes records in accordance with all the procedures and instructions in the Inland Waterway Guide to Good Practice.

Work Plan 14 – Registration and documentation

All data should be recorded in writing partly in connection with proper traceability. In addition there must be instructions available at the work site which describe how action is to be taken. Work Plan 2 (inspection of loading compartments), Work Plan 13 (sampling of products) and Work Plan 13 (quality improvement form) are the main documents to be registered. Registration is a legal obligation of which you will in contravention if you do not carry it out. The procedure for registration and documentation has been laid down in [Work Plan 14](#).

Work Plan 15 – Verification

Verification is checking to see if the Guide is being complied with. The operation of the Guide must be verified regularly. Inspection is used to find out if the system is working as intended. Recording can be done by keeping the reports drawn up in accordance with the specified inspection in [Work Plan 15](#).

This work plan can be an additional part of an external verifier.

Work Plan 16 – After-Care

This last step ensures that in the event of changes to the product to be transported or in the event of changes to the transportation process, the system can be modified. The inspection in Work Plan 15 provides for irregularities within the Guide to Good Practice. All changes which relate to feed and food safety (such as legal provisions) will be recorded by the organisation of interested parties. These changes to the Guide to Good Practice will then be sent round to all carriers which use this code. The procedure for changing the procedures and instructions in the Guide to Good Practice has been laid down in Work Plan 16.

3.5. Overview of work plans

- Work Plan 1** - Dedicated transport
General information on the product groups which are transported and any determination of 'dedicated transport'.
- Work Plan 2** - Loading Compartment Inspection (LCI)
Information & Inspection relating to the product and the loading compartments (form)
- Work Plan 3** - Personal hygiene
General instructions related to personal hygiene on board
- Work Plan 4** - General hygiene
General procedure for hygienic working on board
- Work Plan 5** - Cleaning
General cleaning procedure for loading compartments
- Work Plan 6** - Loading
General procedure for loading
- Work Plan 7** - Transport
General procedure for transportation
- Work Plan 8** - Unloading
General procedure for unloading
- Work Plan 9** - Previous Loads
Procedure for obtaining "dedicated" status and what to do with prohibited and unlisted loads
- Work Plan 10** - Prescribed temperatures
Procedure for minimum & maximum temperatures of the load
- Work Plan 11** - Cargo Record Book
Registration for loads
- Work Plan 12** - Protest Letter
Procedure for submitting a protest

- Work Plan 13** - Complaints handling
Procedure for complaints handling
- Work Plan 14** - Registration and documentation
Procedure for registration and documentation
- Work Plan 15** - Verification
Verification procedure
- Work Plan 16** - After-Care
Procedure relating to changes to the Guide to Good Practice

HACCP WORK PLAN 1a Food

PRODUCTS AND PRODUCT GROUPS

AIM: To provide information on the products to be transported which may lead to the determination of possible hazards, recognise those hazards and prevent any contamination. The exclusive transportation of food or raw materials for food leads to 'dedicated' transport.

SPECIALISATIONS a) TRANSPORT BY DRY LOAD SHIP (INLAND WATERWAY)
b) TRANSPORT BY TANKER (INLAND WATERWAY)

VESSEL NAME :

SHIPPER :

DECLARATION : a) THAT THE ABOVE-MENTIONED VESSEL, AFTER A THOROUGH CLEANING AND EXPERT INSPECTION, (for more than 6 months on a very regular basis meaning at least several times per month) ONLY TRANSPORTS THOSE PRODUCTS DESCRIBED BELOW AND THEREFORE IS ELIGIBLE FOR THE DESIGNATION:
b) THAT THE ABOVE-MENTIONED TANKER WAS ORIGINALLY BUILT OR SUFFICIENTLY CONVERTED FOR THE TRANSPORT OF THOSE PRODUCTS DESCRIBED BELOW AND THEREFORE ELIGIBLE FOR THE DESIGNATION:

'FOOD ONLY'

or words with a similar meaning

PRODUCTS : IN PRINCIPLE ALL FOOD AND RAW MATERIALS FOR FOOD IN BULK LOADS BOTH IN LIQUID FORM AND IN SOLID FORM WITH THE EXCEPTION OF WHOLE LOADS OF ADDITIVES OR OTHER PRODUCTS WHICH ARE ADDED TO FOOD ONLY IN VERY SMALL PERCENTAGES.

PRODUCT NAMES :

(see Appendix 2 Food in tanker shipping)

SHIPPER/OWNER
(stamp + name + signature)
.....

INSPECTION COMPANY
(stamp + name + signature)
.....

HACCP WORK PLAN 1b Feed

PRODUCTS AND PRODUCT GROUPS

AIM: To provide information on the products to be transported which may lead to the determination of possible hazards, recognise those hazards and prevent any contamination. The exclusive transportation of feed materials, compound feed and premixtures leads to 'dedicated' transport.

SPECIALISATIONS a) TRANSPORT BY DRY LOAD SHIP (INLAND WATERWAY)
b) TRANSPORT BY TANKER (INLAND WATERWAY)

VESSEL NAME :

SHIPPER :

DECLARATION : a) THAT THE ABOVE-MENTIONED VESSEL, AFTER A THOROUGH CLEANING AND EXPERT INSPECTION, (for more than 6 months on a regular basis) ONLY TRANSPORTS THOSE PRODUCTS DESCRIBED BELOW AND THEREFORE IS ELIGIBLE FOR THE DESIGNATION:
b) THAT THE ABOVE-MENTIONED TANKER WAS ORIGINALLY BUILT OR SUFFICIENTLY CONVERTED FOR THE TRANSPORT OF THOSE PRODUCTS DESCRIBED BELOW AND THEREFORE ELIGIBLE FOR THE DESIGNATION:

'FEED ONLY, AGRI-ONLY
or words with a similar meaning

PRODUCTS : IN PRINCIPLE ALL FEED MATERIALS, COMPOUND FEED AND PREMIXTURES IN BULK LOADS BOTH IN LIQUID FORM AND IN SOLID FORM WITH THE EXCEPTION OF WHOLE LOADS OF ADDITIVES OR OTHER PRODUCTS WHICH ARE ADDED TO **FEED** ONLY IN VERY SMALL PERCENTAGES.

PRODUCT NAMES :
.....

HACCP WORK PLAN 3

PERSONAL HYGIENE ON BOARD

AIM: Through personal hygiene on board preventing any harmful influence on the feed or food safety of the products to be transported.

The following procedure applies for personal hygiene on board:

1. Both the carrier and his personnel must be aware of the legislation relating to personal hygiene during the loading, transport and unloading of feed and food;
2. The carrier must supervise his personnel and any third parties during their activities on board.
3. Personal hygiene on board means:
 - a. Persons who suffer from the following complaints must immediately report the complaint and the possible cause to the carrier and must not come into contact with the load. This is especially true for:
 - an illness which is transferred via food.
 - infected wounds, skin infections or sores
 - diarrhoea, vomiting, jaundice.
 - b. It is not permitted to eat, smoke or drink in loading compartments for food or feed.
 - c. During the loading or unloading of bulk goods it is not permitted to eat, smoke or drink.
 - d. Personnel who come into contact with food or feed will wear clean portative clothing, head covering and footwear. Clean footwear (overshoes) when entering the load.
 - e. Personnel (such as inspectors) who come into contact with food or feed must take measures to prevent the contamination of food or feed by personal possessions or jewellery (pens, pencils, GSM, lighters, cigarettes, earrings, rings, etc.).

HACCP WORK PLAN 4

GENERAL HYGIENE PROCEDURE

AIM: To prevent any harmful influence on the feed or food safety of the products to be transported.

The following procedure applies for hygiene on board:

1. Both the carrier and his personnel must be aware of the legislation relating to hygienic working during loading, transport and unloading of the goods;
2. The carrier must supervise his personnel during their activities on board.
3. The carrier will take suitable preventive actions against pest on board. The carrier will therefore ensure
 - a. Well-maintained loading compartments and seals (valves, hatches);
 - b. The proper discharge of flushing and rainwater, not accessible to rodents
 - c. A clean working environment, free of dirt, food and places to hide for rodents;
 - d. A good, hygienic method of working, and
 - e. A good entry check (within the possibilities available to the carrier).

In the case of an actual pest problem (anywhere on the ship), the carrier will ensure that a certified pest controller draws up a suitable control plan and / or a certified company can gas the contaminated spaces against harmful insects. The presence of pest in the cargo must be reported to the client.

4. Hygienic working on board means the prevention of:
 - a. Accumulation of dirt in the loading compartments,
 - b. Contamination created by previous loads,
 - c. Contamination created by joint loads,
 - d. Mould in the loading compartments,
 - e. Contamination with oil or water from other compartments or ballast water,
 - f. Faults on board the vessel such as cracks and holes through which pest or flushing water and suchlike can enter.
 - g. Contamination created by the cleaning, pesticide and disinfectants used.
 - h. Pets get into loading compartments in which there are food or feed stored.
 - i. External contamination during loading and unloading (weather, birds, bird excretions etc.)

HACCP WORK PLAN 5a

GENERAL CLEANING PROCEDURE FOR TANKER VESSELS

AIM: The prevention of possible contamination by components which are undesirable for feed and food through proper, expert cleaning of the loading compartments.

PROCEDURE

The cleaning procedure for the loading tanks of tankers will contain at least the following sections:

- a. The loading compartments must be completely emptied.
- b. Loading compartments will be washed with hot or cold water (see provisions under c) depending on the previous load. The following applies:
 - cold water is used for products which do not solidify
 - hot water is used for products which do solidify.
- c. The water is sprayed by way of a 'butter wash installation' or similar under high pressure (c. 6 bar), into the loading compartments. This 'washing water' is sucked out using the loading pump and pumped into the 'swill tanks'. It is very important that the water used for cleaning means of transport is of good quality (spring water, tap water, process water). In this, it is important that the owner of the means of transport carries out a risk assessment of the (re)use of the washing water. The water must be of such quality that it cannot cause contamination on the product to be loaded. The carrier can carry out (source) water analysis (or have it carried out) or request analysis results from the water supplier of the washing water. Any cargo residues must be disposed of in accordance with the rules of the Scheepsafvalstoffenbesluit (Ship Waste Decree) and the CDNI Convention.
- d. Only food grade' cleaning agents may be used. The carrier must be able to demonstrate this by technical data sheets (for example MSDS - Material Safety Data Sheets). Data sheets are available from the suppliers of the cleaning agents..
- e. After cleaning, there may be no detectable traces of the cleaning agents left in the loading compartment and the pipes (odour, foam, moisture etc.).
- f. The cleaning which is carried out must be recorded.
- g. There should always be an inspection of the loading compartments (LCI) after cleaning and before loading with food or feed. This must be done by a certified inspection company (ISO 17020 or equivalent) or competent person of the company which issues the order for the transport (manufacturer and/or trader).

For definition see F 0.2 *Definition list*. This is a legal obligation for the load owner (principal). If

no LCI takes place, the skipper must draw up a protest letter (WP 13) and send it to the principal.

Deviations from these rules are carried out by order and in consultation with the load stakeholders, but may never lead to a lower form of cleaning than prescribed in this standard.

NOTE

In the event that a carrier receives a report of a microbiological deviation in a previous batch then the loading compartment must also be disinfected with a food grade disinfectant during the next cleaning. The carrier must be able to demonstrate this by technical data sheets (for example MSDS). Disinfection always takes place after cleaning. No traces of disinfectant may remain after disinfection.

HACCP WORK PLAN 5b

GENERAL CLEANING PROCEDURE FOR DRY LOADING VESSELS

AIM: The prevention of possible contamination by components which are undesirable for feed and food through proper, expert cleaning of the loading compartments.

PROCEDURE

The cleaning procedure for the loading tanks of dry-loading vessels will contain at least the following sections:

- a. The loading compartments must be completely emptied.
- b. Depending on the previous load the loading compartments will be handed over brushed clean.
- c. The brooms, scoops, etc. used for cleaning the loading compartments must be cleaned after use. This cleaning must be registered. This is especially true if the brooms, scoops, etc. are also used for other loads than food and feed.
- d. Depending on the previous load the loading compartments will be cleaned with detergent and/or sprayed with water. Washing water and any load residues must be disposed of in accordance with the rules of the Ship Waste Decree and the CDNI Convention.
- e. Only 'food grade' cleaning agents may be used. The carrier must be able to demonstrate this by technical data sheets (for example MSDS). Datasheets can be requested from the supplier.
- f. After cleaning, there may be no detectable traces of the cleaning agents left in the loading compartment (odour, foam, moisture etc.).
- g. If the loading compartments are dry then the vessel is ready for a new load.
- h. The cleaning which is carried out must be recorded.
- i. There should always be an inspection of the loading compartments (LCI) after cleaning and before loading with food or feed. This must be done by a certified inspection company (ISO 17020 or equivalent) or competent person of the company which issues the order for the transport (manufacturer and/or trader). For definition see F 0.2 *Definition list*. This is a legal obligation for the load owner (principal). If no LCI is carried out, the skipper must draw up a protest letter (WP 13) and send it to the principal.

Deviations from these rules are carried out on behalf of and in consultation with the load stakeholders, but may never lead to a lower form of cleaning than prescribed in this Guide to Good Practice.

NOTE

In the event that a carrier receives a report of a microbiological deviation in a previous batch then the loading compartment must also be disinfected with a food grade disinfectant during the next cleaning. The carrier must be able to demonstrate this by technical data sheets (for example MSDS). Disinfection always takes place after cleaning. No traces of disinfectant may remain after disinfection.

HACCP WORK PLAN 5c

GENERAL CLEANING PROCEDURE FOR CONTAINER AND GENERAL CARGO VESSELS

AIM: The prevention of possible contamination by components which are undesirable for feed and food through proper, expert cleaning of the loading compartments (containers and general cargo).

PROCEDURE

As the containers are received and delivered filled and closed, there is no cleaning procedure which applies to the transportation of containers.

Packaged general cargo (boxes, bagged goods, IBCs, etc.) ensures to a greater or lesser degree that there is protection from the outside world. After packaged general load (regardless of the type of load), the loading compartment hold should be cleaned with water at least. This in connection with packaging residues (paper, wood splinters, metal splinters, pieces of rope, jute, etc.) that may remain behind.

Deviations from these rules will take place at the behest of and in consultation with those with an interest in the load, but can never lead to a lower form of cleaning than prescribed in this standard.

HACCP WORK PLAN 6

HACCP- PLAN FOR "CLEANING, ACCEPTANCE OF THE ORDER AND LOADING"

AIM: To ensure by way of audits and corrective actions that no contamination by components which may be harmful to feed or food can take place.

SBM Number (process)	Risk	Norms		Control measure	Control			Corrective action		Documentation - Work Plan
		Action limit	Rejection limit		Method	Frequency	Responsibility	Method	Responsibility	
SBM1 (Cleaning)	Unsatisfactory cleaning with as a result:	Traces (visual, odour) of previous load, dry floors in loading compartments.		Cleaning and, if necessary, disinfection of loading compartment and loading equipment and tools in accordance with the Appendix 1.	Organoleptic (visual, odour) check of loading compartment and loading equipment	After every cleaning	Carrier, Inland waterway transport staff	Clean again, possibly extend cleaning (with water, food grade cleaning agent) and check again.	Carrier	Work Plan 5a, 5b and 5c, Appendix 1
	- Microbial contamination	Salmonella absent in 25g.								
	- Physical contamination	- No demonstrable traces of glass, metals, plastic - Botanical purity (feed) min. 95% - Contractual agreements								
					Inspection of the cleaning of critical components.	After every cleaning	Carrier, Inland waterway transport staff	Clean again, possibly extend cleaning (with water, food grade cleaning agent) and check again. Revise cleaning plan in the event of repeated non-conformity.	Carrier	Work Plan 5a, 5b and 5c

SBM Number (process)	Risk	Norms		Control measure	Control			Corrective action		Documentation - Work Plan
		Action limit	Rejection limit		Method	Frequency	Responsibility	Method	Responsibility	
	- Chemical contamination	In accordance with legal norms.			LCI	Before every load	Inspector	Clean again, possibly more extensively and resubmit the loading compartment for inspection. No inspector present: inform the principal via protest letter	Carrier	Work Plan 2 Work plan 12
				"Dedicated" transport	Check freights for last 6 months.	Once on inspection request	Inspector	From last "non-dedicated" load, set new period of 6 months for fresh inspection.	Carrier	Work Plan 1a, 1b
SBM2 (Loading)	Non-standard temperature with as result:	In accordance with temperature overviews Work Plan 10.	- Measure, compare and record temperature on receipt.** - Organoleptic check (colour, structure, odour)*	Comparison to standard value	Every relevant load	Carrier, Inland waterway transport staff	- Stop loading - Inform client - Follow-up action in consultation with client. - pest control - comment in loading journal	Carrier	Work plan 4 Work Plan 10a, 10b and 10c. Work Plan 11	
	- Physical deviations (colour, odour, viscosity)	- In accordance with product characteristics in the specification. - Pumpability (fats and oils)		Compare product to recorded batch details						
	- Microbiological growth	Salmonella absent in 25g.								

* Check during unloading and of the unloading equipment and the general state of hygiene of the unloading location by the shipper is necessary but always within the possibilities available to the shipper. The client or owner or recipient is responsible for the unloading equipment involved.

SBM Number (process)	Risk	Norms		Control measure	Control			Corrective action		Documentation - Work Plan
		Action limit	Rejection limit		Method	Frequency	Responsibility	Method	Responsibility	
SBM3 (Loading / Unloading)	Precipitation during loading or unloading with the risk of:			Protect loading compartment and load against precipitation	Supervision of the best possible sealing of the loading/unloading opening and of the loading compartment.	For any form of precipitation	Inland waterway transport staff	<ul style="list-style-type: none"> - Statement by owner questions - Stop loading / unloading - Note in cargo record book - Inform client - Follow-up action in consultation with client. - Block load 	Carrier	<ul style="list-style-type: none"> Work Plan 6 Work Plan 8 Work Plan 11
	- Physical damage (increased moisture content, damage to packaging)	No external traces of damage to products or packaging								
	- Microbiological growth	Salmonella absent in 25g.	Visual assessment of "rained on" batch for mould or condensation*		During delivery of batches where loading took place during precipitation	Carrier Inland waterway transport staff				

HACCP WORK PLAN 7

HACCP PLAN for "TRANSPORT"

AIM: To ensure by way of audits and corrective actions that no contamination by components which may be harmful to feed or food can take place.

SBM Number (process)	Risk	Norms	Control measure	Control		Corrective action	Documentation - Work Plan		
SBM4 (Transport)	Temperature variations due to fault in refrigeration equipment with as a result:		Properly functioning refrigeration equipment	- Measurement of the temperature of the load involved (temperature must be readable from the outside).	Daily for refrigerated batches. Registration in cargo record book	Carrier Inland waterway transport staff	- Block load - Note in cargo record book - Inform client - Follow-up action in consultation with client.	Carrier	Work Plan 10 a, 10b and 10 c. Work Plan 11
	- Physical damage (structure damage, colour or odour deviations, packaging damage)	No traces of organoleptic deviations in load.*							
	- Microbiological growth	Salmonella absent in 25g.							
			- Check operation of refrigeration equipment	Vessel refrigeration: monthly	Carrier	- Inform client - In consultation, transfer load to another vessel - Note in cargo record book - Repair equipment - Possibly switch to emergency arrangements.			

SBM Number (process)	Risk	Norms	Control measure	Control		Corrective action		Documentation - Work Plan	
					Refrigerated container (reefer): during loading	Carrier Inland waterway transport staff	- Inform client - In consultation, transfer load to another container. - Note in cargo record book - Possibly switch to emergency arrangements.		

* Check must take place with the possibilities available to the shipper.

HACCP WORK PLAN 8

HACCP PLAN for "UNLOADING"

AIM: To ensure by way of audits and corrective actions that no contamination by components which may be harmful to feed or food can take place.

SBM Number (process)	Risk	Norms	Control measure	Control			Corrective action		Documentation - Work Plan
SBM3 (Loading / Unloading)	Precipitation during loading or unloading with the risk of:		Protect loading compartment and load against precipitation	Supervision of loading and unloading and the covering of loads and the loading compartment.	For any form of precipitation	Inland waterway transport staff	- Statement by owner questions - Stop loading / unloading - Note in cargo record book - Inform client - Follow-up action in consultation with client. - Block load	Carrier	Work Plan 6 Work Plan 8 Work Plan 11
	- Physical damage (increased moisture content, damage to packaging)	No external traces of damage to products or packaging		Visual assessment of "rained on" batch for mould or condensation	During delivery of batches where loading took place during precipitation				
	- Microbiological growth	Salmonella absent in 25g.							

* Check during unloading and of the unloading equipment and the general state of hygiene of the unloading location by the shipper is necessary but always within the possibilities available to the shipper. The client or owner or recipient is responsible for the unloading equipment involved.

HACCP WORK PLAN 9a TANKERS

PREPARATION FOR “DEDICATED FOOD and/or FEED” STATUS

AIM: To use guidelines to ensure that “dedicated” status can be obtained.

These guidelines apply to inland waterway vessels which wish to comply with the requirements for ‘dedicated food and/or feed’ transport status in accordance with Work Plan 1a

1. Guideline for products which still have to go through a processing stage:
 - a. Ships equipped with stainless steel loading compartments:

These ships must originally be built for the transport of products for the food and / or feed industry. Should these ships have loaded products other than products for the food and feed industry, all parts that may come into contact with the load must be replaced with stainless steel materials. This applies to the pipes, coils, pumps (and possibly even the loading compartments and the boiler, if these are not in good condition and / or cannot be cleaned properly. This must be substantiated by a specific risk analysis).
 - b. Ships equipped with iron (mild steel) or coated loading compartments:

These ships must originally be built for the transport of products for the food and / or feed industry. If these ships have loaded products other than products for the food and feed industry, these ships will no longer be eligible for the status of dedicated food and / or feed, unless all parts that may come into contact with the load (loading compartments, pipes, coils, pumps, boiler, etc.) are replaced by new stainless steel materials.

Please note: This also applies to the mild steel slob tanks and / or mild steel ballast tanks if these are used for washing the cargo tanks.

In all cases, a careful inspection and associated analysis must be carried out by a recognized inspection company (ISO17020) and a maritime expert. After approval, the inspection company issues a release certificate (certificate) and an inspection report from the maritime expert, which is required to obtain the dedicated status. This certificate is not an LCI (visual inspection) but a statement that all the above requirements have been met.

The dedicated status does not release the ship from the usual inspections (LCIs) and the cleaning procedures involved (Appendix 1).

HACCP WORK PLAN 9b DRY LOAD SHIPS

PREPARATION FOR “DEDICATED FOOD and/or FEED” STATUS

AIM: To use guidelines to ensure that “dedicated” status can be obtained.

These guidelines apply to vessels which wish to comply with the requirements for 'dedicated feed' transport status in accordance with Work Plan 1b

1. Guideline for products which still have to go through a processing stage (raw material):
 - a) Vessels equipped with stainless steel or properly coated loading compartments:
After thorough cleaning by an expert company (tank cleaning) only neutral products (see Appendix 1) should be transported for the first six months (on a regular basis at least several times a month).
 - b) Vessels equipped with iron (mild steel) or wooden loading compartments:
After thorough cleaning by an expert company (tank cleaning) only neutral products (see Appendix 1) should be transported for the first six months (on a regular basis, at least several times a month). After this period, the ship must be sandblasted and repainted (food grade, see explanation paragraph 3.2)
2. Guideline for products which no longer have to go through a processing stage (finished products):
 - a) Vessels equipped with stainless steel or properly coated loading compartments:
After thorough cleaning by an expert company (tank cleaning) only neutral products of vegetable origin (see Appendix 1) should be transported for the first six months (on a regular basis, at least several times a month). Ships that have transported forbidden loads (such as household waste) do not qualify for the dedicated status unless they replace the loading compartments.
 - b) Vessels equipped with iron (mild steel) or wooden loading compartments:
All previous loads must have been feed materials, compound feed or premixtures or the vessel should have loading compartments which were built for the transport of feed materials, compound feed or premixtures. If this has been deviated from, the dedicated status cannot be obtained, unless they replace the loading compartments.

In all cases, a careful inspection and associated analysis must be carried out by a recognized inspection company (ISO17020) or equivalent. After approval, this company issues a release certificate, which is required to obtain the dedicated status.

The dedicated status does not release the ship from the usual inspections (LCIs) and the cleaning procedures involved (Appendix 1).

HACCP WORK PLAN 9c DRY LOAD SHIPS

RELEASE AFTER THE TRANSPORT OF PROHIBITED AND UNLISTED LOADS

AIM: Preventing by way of guidelines the contamination of feed and food by undesirable previous loads.

These guidelines apply to inland waterway vessels which have transported a prohibited or unlisted load and then wish to transport food or feed.

There may be circumstances in which a carrier has transported a prohibited or unlisted load. The usual cleaning procedures (Work Plan 5) are not sufficient in this case for releasing the vessel and the loading compartments for the transport of food and feed.

1. If the last previous load appears on the list of “forbidden previous loads’ (see Appendix 1) or is not listed at all, then the vessel is no longer suitable for the transportation of food, feed, compound feed or premixtures and must be removed from the list of accepted ships.

A loading compartment can be released after prohibited loads in accordance with the following procedure:

Step 1

Cleaning in accordance with the prohibited load shall be carried out using water and a food grade cleaning agent and/or a food grade disinfection with a food grade disinfection agent (if applicable) according to the nature of the prohibited load, according to a protocol previously developed by the company. All loads that fall under the scope of Regulation 999/2001 must have and follow a procedure approved and documented by the competent authority.

Step 2

Assessment at the expense of the company of the loading area after the above cleaning and disinfection as specified in step 1 by a certified inspection company (ISO 17020 or equivalent). For definition see F 0.2 *Definition list*.

The inspection company will use a cargo record book to find out which previous loads have been transported and which cleaning and disinfections have been carried out.

The loading area of the means of transport is then organoleptic checked for any residue, especially in places that are difficult to clean. Any further doubt with the verifying body requires further steps to be taken (see note below).

PLEASE NOTE: This inspection goes much further than an LCI. The risks and also liability are many times higher because of the possible adverse effects of the prohibited load. If the doubt cannot be allayed, the loading compartments must be sandblasted and repainted (food grade paint or coating). The certificate of release must ensure that the ship can be used again for food and feed. It is not an inspection certificate, but a guarantee certificate.

Step 3

Issuing by the inspection company of a certificate that must indicate whether the loading area can be released for (further) transport of feed and food.

Note:

Depending on the previous loads and the results of the visual inspection, then, at the discretion of the inspector from the inspection company, further hygiene measurements can be carried out using ATP measurements and/or agar stamps, at the carrier's expense. Another possibility is rinsing again followed by an analysis of the latest flushing water. In extreme cases, sandblasting and repainting of the loading compartments is the only option.

Appendix 1 includes additional instructions on unlisted loads.

HACCP WORK PLAN 10a

PERMITTED TEMPERATURES IN THE EVENT OF TANKER TRANSPORT

AIM: To protect products which are sensitive to temperature changes from spoilage or other processes which are undesirable for feed or food by way of guidelines.

The CODEX has drawn up the following guidelines with respect to maximum and minimum temperatures for the loading and unloading of batches of edible oils and fats.

CODEX CAC/RCP 36 – 1987 (Rev. 6-2015)

Recommended international guide to good practice for the storage and transport of edible oils and fats in bulk:

Oil / fat	Storage and bulk transport		Loading and unloading	
	Min °C	Max °C	Min °C	Max °C
Castor Oil	20	25	30	35
Coconut oil	27	32	40 ⁴	45 ⁴
Fatty acids, coco	Environment	Environment	Environment	Environment
Cotton seed oil	Environment	Environment	20	25 ¹
Fish oil	20	25	25	30
Fish fatty acids	Environment	Environment	Environment	Environment
Ground nut oil	Environment	Environment	20	25 ¹
Hydrogenated oil	Variable	-	Variable	- ²
Lipid butter	38	41	50	55
Pig fat (Lard)	40	45	50	55
Linseed oil	Environment	Environment	10	20 ¹
Corn oil	Environment	Environment	10	20 ¹
Olive oil	Environment	Environment	10	20 ¹

¹ It is recognised that in some cases the ambient temperatures may exceed the recommended maximum figures shown in the Table.

² Hydrogenated oils can vary considerably in their slip melting points, which should always be declared. It is recommended that during the voyage, the temperature should be maintained at around the declared melting point and that this should be increased prior to discharge to give a temperature of between 10 and 15°C above that point to effect a clean discharge.

³ Different grades of palm stearin may have wide variations in their slip melting points and the temperature quoted may need to be adjusted to suit specific circumstances.

⁴ For warmer climates, the loading and discharge temperatures for coconut oil and palm kernel oil are Min 30°C, Max 35°C or ambient temperatures

Oil / fat	Storage and bulk transport		Loading and unloading	
	Min °C	Max °C	Min °C	Max °C
Palm oil	32	40	50	55
Palm olein	25	30	32	35
Palm stearin	40	45	60	70 ³
Palm fatty acids	Environment	Environment	Environment	Environment
Palm kernel oil	27	32	40 ⁴	45 ⁴
Palm kernel olein	25	30	30	35
Palm kernel stearin	32	38	40	45
Palm kernel fatty acids	Environment	Environment	Environment	Environment
Rape seed oil	Environment	Environment	10	20 ¹
Rapeseed fatty acids	?	?	?	?
Safflower oil	Environment	Environment	10	20 ¹
Sesame (seed) oil	Environment	Environment	10	20 ¹
Sheanut butter	38	41	50	55
Soybean oil	Environment	Environment	20	25 ¹
Soya/Sunflower/Maize fatty acids	Environment	Environment	Environment	Environment
Sunflower oil	Environment	Environment	10	25 ¹
Cattle / Vegetable fat (tallow)	Environment (T ≤ 10 days)*	Environment (T ≤ 10 days)*	55	65
Cattle / Vegetable fat (tallow)	35 (T > 10 days)*	45 (T > 10 days)*	55	65

* T = journey time

¹ It is recognised that in some cases the ambient temperatures may exceed the recommended maximum figures shown in the Table.

² Hydrogenated oils can vary considerably in their slip melting points, which should always be declared. It is recommended that during the voyage, the temperature should be maintained at around the declared melting point and that this should be increased prior to discharge to give a temperature of between 10 and 15°C above that point to effect a clean discharge.

³ Different grades of palm stearin may have wide variations in their slip melting points and the temperature quoted may need to be adjusted to suit specific circumstances.

⁴ For warmer climates, the loading and discharge temperatures for coconut oil and palm kernel oil are Min 30°C, Max 35°C or ambient temperatures

HACCP WORK PLAN 10b

PERMITTED TEMPERATURES IN THE EVENT OF DRY LOADING TRANSPORT

AIM: To protect products which are sensitive to temperature changes by way of guidelines from spoilage or other processes which are undesirable for feed or food.

The shipper is bound to follow the instructions of the client with respect to temperature control for the transport, loading and unloading of batches of food, raw materials for food, feed materials, compound feed or premixtures.

The products must be covered during transport in as far as this does not harm product quality. Where necessary, for the maintenance of product quality, there must be ventilation to prevent problems with condensation.

The principal must be informed or consulted in case of any form of serious temperature deviation.

HACCP WORK PLAN 10c

PERMITTED TEMPERATURES IN THE EVENT OF CONTAINER TRANSPORT

AIM: To protect products which are sensitive to temperature changes from spoilage or other processes which are undesirable for feed or food by way of guidelines.

The Guide to Good Practice for Road Transport (Food) specifies that the following guidelines are to be followed with respect to the monitoring of temperature control for the transport, loading and unloading of batches of food, raw materials for food, feed materials, compound feed or premixtures.

This is the **internal temperature (in °C)** of products.

	Legal temperature	Advised temperature
Frozen fruit juices / ice	≤ -/- 18 °C	≤ -/- 20 °C
Frozen fish	≤ -/- 18 °C	≤ -/- 20 °C
Frozen butter & other fats	≤ -/- 18 °C	≤ -/- 20 °C
Frozen meat	≤ -/- 18 °C	≤ -/- 20 °C
Other frozen food	≤ -/- 18 °C	≤ -/- 20 °C
Milk products	≤ 7 °C	≤ 4 °C
Poultry & Rabbit	≤ 4 °C	-/- 2 - 4 °C
Fish, molluscs, shellfish	≤ 4 °C	in melting ice (-/- 0 °C)
Meat	≤ 7 °C	≤ 4 °C
Meat products	≤ 7 °C	≤ 4 °C

INSTRUCTIONS RELATING TO MAXIMUM AND MINIMUM TEMPERATURE
AND POSSIBLE MAXIMUM PERIODS OF TRANSPORT

(with respect to storage life)

WILL BE OBTAINED FROM THE CLIENT.

DEVIATIONS FROM THIS MUST ALWAYS BE REPORTED
TO THE CLIENT.

HACCP WORK PLAN 11

CARGO RECORD BOOK

(Example provided that all involved information below must be provided)

AIM: Transported loads can be effectively traced through the registration of loads

Name of vessel:			
European vessel number:

HACCP WORK PLAN 14

REGISTRATION & DOCUMENTATION

(Example provided that all involved information below must be provided)

AIM: To register and document all the relevant documentation for this Guide to Good Practice so that it can be seen what has happened in the past.

General:

Registration is the collection of all the data involved. Not only the agreed procedures but particularly the other data such as the inspections of the vessels, the sampling and the records of complaints must be properly registered.

Documenting is the recording of all the registered data in a documentation summary. It is of great importance that the information on the safe transportation of feed and food is properly recorded. Examples may include the inspection of loading compartments, the temperature measurement data and the details of previous loads. The conditions during transshipment and transport and the information on the products should also be recorded.

Procedure:

The data involved should be available on board the vessel for a period of at least two years (unless otherwise stated in national legislation). In the event of possible inspections this data should be able to be shown and explained. The carrier must also use a checklist that indicates which procedures have been used for a particular trip.

- These procedures are:
- Work Plan 3,4 - hygiene
 - Work Plan 5 - cleaning loading compartments
 - Work Plan 6,7,8 - transport process
 - Work Plan 9 - previous loads
 - Work Plan 10 - minimum and maximum temperatures
 - Work Plan 15 - verification
 - Work Plan 16 - review in the event of changes (after-care)

With respect to the information on the products and circumstances during transshipment and transport, the following documents should be used:

- Work Plan 1 - Information with respect to 'dedicated' transport
- Work Plan 2 - Inspection of loading compartments
- Work Plan 11 - Cargo Record Book (identification & traceability)
- Work Plan 12 - Protest Letter
- Work Plan 13 - Complaints registration

These documents should also be available on board for a period of at least two years and should be shown in any inspection.

CHECKLIST FOR PROCEDURES USED

Example to check whether all requirements of the Guide to Good Practice are being met)

HACCP WORK PLAN 15

VERIFICATION

AIM: To find out whether the Guide to Good Practice work plans lead in practice to the safe transport of feed and food and whether they meet the legal requirements.

VERIFICATION PROCEDURE

General:

Verification is checking to see if the Guide is being complied with. There are several options for performing the verification:

- The carrier / captain regularly does this himself.
- The verification can be carried out by an accredited inspection company at a specified frequency.
- The verification takes place during the periodic inspection of the verification company to which the ship is affiliated (mandatory registration in the GMP+ company database)

Expected questions:

1. Are the work plans all present (16 items) and are they used.
2. Are the hazards recognised and included in the work plans.
3. Are the hazards sufficiently controlled.
4. Does the shipper know enough about the operation and structure of the work plans.
5. Are the work plans (where applicable) properly completed.
6. Are there regulations from the structure of the work plans.
7. Are the corrective actions always carried out.
8. Do all employees know the structure and operation of the work plans.
9. Is the letter of protest used.
10. Is use made in the event of deviations of the quality improvement form.
11. Is the system reviewed in the event of external changes.
12. Are verifications recorded and registered.

Content of the work plans

- WP 1+2 AIM: To provide information on the products to be transported which may lead to the determination of possible hazards, recognise those hazards and prevent any contamination through inspections.
- WP 3+4 AIM: To prevent through personal and also general hygiene on board that there is any negative effect on food safety.
- WP 5 AIM: To prevent contamination by harmful elements of feed and food by cleaning loading compartments.
- WP 6,7+8 AIM: Ensuring that during transportation that no contamination by harmful elements of feed and food can take place.
- WP 9 AIM: To prevent contamination by harmful previous loads of feed and food there should be guidelines which exclude contamination by these previous loads.
- WP 10 AIM: To protect products which are sensitive to temperature differences from spoilage or other processes which are harmful to feed and food there should be guidelines to prevent this.
- WP 11 AIM: To trace transported loads effectively through the registration of loads.
- WP 12 AIM: Attention is drawn to feed and food safety by submitting a protest against the absence of an inspector.
- WP 13 AIM: All complaints and/or other remarks relating to the safe transportation of feed or food should be recorded with the purpose of improving any possible harmful situation.
- WP 14 AIM: All the relevant documentation for this Guide to Good Practice should be registered and documented such that in the event of an inspection it is possible to see what has happened in the past.
- WP 15 AIM: To find out if the Guide to Good Practice work plans lead in practice to the safe transportation of feed and food. Work plans must comply with the intention of the legal (HACCP) requirements.
- WP 16 AIM: The maintenance of the (legal) changes to the Guide to Good Practice.

HACCP WORK PLAN 16

PROVISION OF INFORMATION IN THE EVENT OF A REVISION OF THE GUIDE OF GOOD PRACTICE

This work plan is carried out by the holder of the Guide to Good Practice

AIM: In the event of changes to the product to be transported or in the transportation process or in the event of legal changes, the Guide to Good Practice should be modified such that all involved parties are made aware of this in good time.

General:

Changes may occur in many forms such as:

- Composition and source of the products
- Factory modifications
- Process methods or parts thereof
- Environmental factors
- Cleaning procedures
- Types of loading tanks
- Storage and transshipment conditions
- Legal provisions
- Quality requirements

If there should be changes which relate to feed and food safety then these changes should be announced to the users as quickly as possible. Changes to legal provisions in particular should be reported in good time.

Procedure:

1. Maintenance of the Guide to Good Practice will be carried out by the GMP+ International in consultation with the organisations of interested parties.
2. Each structural change will be made available to all those involved.
3. All changes to legal provisions will be reported to the users of the Guide to Good Practice.

APPENDIX 1

LOAD LIST FOR PREVIOUS LOADS AND CLEANING REGIMES

Four basic principles can be distinguished with respect to cleaning and disinfection. The established cleaning regimes represents the minimum necessary cleaning. If the loading compartment is not clean after the cleaning in question then additional cleaning must take place. The four basic principles for cleaning are:

Cleaning regime	Cleaning method
A	Dry clean
B	Cleaning with water
C	Cleaning with a cleaning agent (Only 'food grade' cleaning agents may be used)
D	Cleaning and disinfection (Only 'food grade' disinfection agents may be used)

Minimally the cleaning regime mentioned in this Appendix must be applied. The LCI, however, may require a stricter cleaning regime before releasing the loading area for loading with food and feed, but never a milder cleaning regime.

Please note:

If a product is not listed into one of the load categories in this Appendix, please consult the International Database Transport for Feed of the GMP+ Feed Certification scheme (www.gmpplus.org).

If the product has been prohibited for road transport or is not listed there either, it will be prohibited for inland shipping. If the product is categorised as requiring at least cleaning regime A, B, C or D, the product may be transported, provided that the required cleaning regime will be applied subsequent to transport.

PROHIBITED PREVIOUS LOADS

- Animal manure
 - Asbestos or materials containing asbestos.
 - Blast furnace granulate, asphalt granulate
 - Domestic waste.
 - Dredged soil (dredging sludge) containing dangerous substances (Eural code 170505)
 - Fuel oil (transported by tankers)
 - Garden soil/compost treated with animal material.
 - Glass waste is prohibited in vessels with a wooden load floor. Glass waste is permitted in vessels with a steel load floor if the glass is washed out
 - Liquid chemical products (transported by tankers)
 - Metal flakes and turnings (which are not degreased, washed and dried).
 - Mineral clay that has been used for detoxification.
 - Packaging material from products in the food industry.
 - POME (waste water from (palm) oil mills)
 - Radioactive material.
 - Seed, plant material from other vegetable cultivation material which is treated with phytopharmaceutical products.
 - Seeds, treated with toxic substances.
 - Sewage sludge.
 - Skins and waste treated with tanning extracts..
 - Slaughter waste
 - Sludge from water purification plants.
 - Toxic oxidative materials and their packaging materials.
 - Untreated food remains
 - Wood, wood chips, or sawdust treated with wood treatment material.
- Processed animal proteins as specified in the applicable legislation and regulations (Vo. (EG) nr. 999/2001.). Release of the loading compartment for the transport of feed must be done by the competent authority. The way in which this is done will be determined by the competent authority in the country in which the company is established.
- (Examples of processed animal proteins are: meat bone meal, animal meal, bone meal, blood meal, dried plasma and other blood products, hydrolysed proteins (if from ruminants),, hoof meal, horn meal, poultry meal, poultry slaughter waste meal, feather meal, fat crackling, fish meal, fish pressed juice, di-calcium phosphate (animal under Reg. (EC) no.56/2013, gelatine (from ruminants) and all other comparable products including mixes, feed, feed additives and premixtures which contain such products).*

MATERIALS WITH A MICROBIOLOGICAL RISK	
Cleaning regime	Products
D	Feed materials from animal origin, not belonging to prohibited previous loads. <i>(Examples of feed materials of animal origin are milk and milk products, eggs and egg products and animal fats). Cleaning and disinfection must take place in accordance with the applicable legislation and regulations (EU 1069/2009)</i>
D	Microbiologically contaminated products (Salmonella, moulds)
D	Rail gravel

MATERIALS CONSTITUTING A PHYSICAL AND/OR CHEMICAL RISK	
Cleaning regime	Products
B	Alumina
B	Alumina (aluminat clinkers)
B	Ammonium nitrate.
B	Anhydrite (sand cement)
B	Barite (spar)
B	Basalt
B	Bauxite (crude and calcinated)
B	Bentonite
B	Biomass
B	Blast-furnace slag
B	Borax
B	Bottom ash, bottom slag (Eural code 190112)
B	Calcium (ordinary mortar lime)
B	Calcium ammonium nitrate (CAN)
B	Calcium ammonium nitrate KAS
B	Cement (Portland)
B	China clay
B	Containers
B	Di-ammonium phosphate (DAP)
B	Ferrous alloys (ferrous manganese, ferrous chrome, ferrous nickel, etc)
B	Ferrous and non-ferrous metals (dry, fat-free, clean)
B	Fluorspar
B	Fly ash (wet)
B	Granite
B	Gypsum (natural)

**MATERIALS CONSTITUTING A PHYSICAL AND/OR CHEMICAL RISK**

Cleaning regime	Products
B	Hygienized animal manure
B	Ilmenite (titanium iron ore)
B	Iron ore
B	Iron ore pellets
B	Kaoline (china clay)
B	Magnesite
B	Magnesium ammonium nitrate MAS
B	Mineral sands (rutile, zircon, nepheline) .
B	Mine-stone
B	Mono-ammonium phosphate (MAP)
B	Mucola (fertilizer)
B	Nutramon (fertilizer)
B	Old paper
B	Pebbles, not contaminated
B	Phosphate
B	Piece goods ((packaged in crates, boxes, bales, bags, big bags)
B	Pig iron (ferro)
B	Potash (potassium carbonate)
B	Potassium
B	Potting compost (green compost)
B	Pyrite (iron ore, sulfur ore)
B	Quartz
B	Run-of-Pile (ROP) (fertilizer)
B	Sand (construction), not contaminated
B	Sheet piling
B	Spar, Spars
B	Stone chippings (tilroad)
B	Sulphur
B	Sulphuric ammoniac
B	Talc (di-calcium phosphate from natural lime)
B	Tree bark and wood chips (unprocessed)
B	Turf (garden)
B	Tyres
B	Ureum (fertilizer)
B	Washed glass waste - if transported in vessels with a steel load floor and if the glass is washed out
B	Wood pellets
C	Ammonium sulfate

MATERIALS CONSTITUTING A PHYSICAL AND/OR CHEMICAL RISK	
Cleaning regime	Products
C	Anthracite
C	Bottom ash, bottom slag (Eural code 190111)
C	Brown coal (briquettes)
C	Coal
C	Coke
C	Dredged soil (dredging sludge) that does not contain any hazardous substances (Eural code 170506)
C	Extracite
C	Ferrous and non-ferrous metals (greased and/or oiled)
C	Fly ash (dry) and Filler fly ash
C	Liquid oils, fats, fatty acids, (esterified) acid oils, glycerine / lecithins of vegetable origin. (For list of food see tanker shipping Appendix 2)
C	Potting soil (GFC green compost)
C	Urea ammonium nitrate solution
MINERALS / METALS / (AN)ORGANIC SUBSTANCES	
B	Salt
C	Metal flakes and turnings (which are degreased, washed and dried)
C	Metal/HMS flakes (heavy metal scrap) which are degreased, washed and dried
C	Non-ferrous concentrates/ores(zinc/lead/copper)
C	Package flakes
C	Peat
C	Petcokes
C	Potting compost containing chemical fertilisers (from Cat 3)
C	Shredder flakes (metal parts if the particle size is greater than 10 mm and fat-free – oil-free)

NEUTRAL MATERIALS	
Cleaning regime	Products
A	(Raw materials for) feed materials* (see also Appendix 2 for tanker shipping)
A	Cellulose
A	Derivatives of copra, palm, citrus, groundnuts, etc.
A	Vegetable feed materials (such as grains)*
A	Vermiculite (perlite)
C	Vegetable feed materials contaminated with insects (ships with a steel bottom)
C	Vegetable oils and fats contaminated with previous loads originating from seagoing vessels and / or land tanks (loaded in tankers with stainless steel equipment such as cargo tanks, spiral pipes, pumps, etc.) in accordance with a specific risk analysis carried out in-house.
D	Vegetable feed materials contaminated with insects (ships with a wooden bottom)
D	Vegetable oils and drums contaminated with previous loads from seagoing vessels and/or land tanks (loaded in tank ships with a mild steel or coated equipment such as cargo tanks, pipes, coils, pumps, etc.) in accordance with a specific risk analysis carried out in-house.

* These product groups may be genetically modified organisms (maize, soya, cotton seed, oil seed rape) or allergens (grains retaining gluten (wheat, rye, oats, barley, spelt, kamut and wheat), crustaceans , eggs, fish, ground nuts , soya, milk, nuts, celery, mustard, sesame seed)). Clients may have additional requirements for these products with respect to cleaning and quality assurance.

APPENDIX 2

LOAD LIST OF PRODUCTS TO BE CONSIDERED AS FOOD IN TANKER SERVICES

(Fediol list of foods for the transport in bulk of oils in or within the European Union)

Federation representing the European Vegetable Oil and Protein meal Industry in Europe

All products shall be of food/food-grade quality!

- Acetic acid
- Alcoholic drinks
- Citric acid
- Cocoa products and chocolate products
- Corn steep liquor
- Crude, semi-refined and refined vegetable oils and fats
- Egg white powder
- Egg yolk powder
- Emulsifiers
- Ethanol
- Fatty acids
- Fish oil
- Fruit juices including concentrates
- Glycerol/glycerin
- Honey
- Jams
- Lactic acid
- Lard and tallow (with veterinary certificate)
- Lecithin
- Liquid yeast
- Malt extract
- Milk and milk products
- Paraffin wax
- Pectin
- Phosphoric acid
- Potable and distilled water
- Propylene glycol
- Soft drinks
- Sweeteners, Natural and Artificial
- Vinegar
- Wheat mix
- White mineral oil

APPENDIX 3a

NOTIFICATION FORM FOR UNSAFE FOODS

[WWW.NVWA.NL](http://www.nvwa.nl)

Only for Dutch companies

Since a skipper / ship owner never owns the goods and is unable to assess exactly whether there is a serious case of contamination, it cannot report an unsafe situation without consulting his client and / or the owner of the goods. It depends on the opinion of these parties regarding a possible report. It can, however, catch rumors and is then obliged to inform the principal or the owner of the goods immediately so that it can investigate whether an official report applies.

In cases where a skipper / ship owner makes a visual observation of a food or feed unsafe situation and it is unable to inform the principal and / or owner of the goods, it is obliged to warn the relevant authorities such as the NVWA, according to the guidelines of the institution concerned.

Brief summary of 'Meldwijzer Onveilige levensmiddelen van de NVWA'

You can report via the notification form on the NVWA website (see path below). If you have any further questions, please call the Customer Contact Center of the NVWA 0900 - 0388

You must immediately provide the following information:

- name and address of your customer (s) for the raw materials / foods
- name and address of your possible supplier
- the date and scope of deliveries
- The terms in this 'Meldwijzer' are based on legal definitions and provisions and can be found in the explanatory notes to the 'Meldwijzer'.
- A number of examples have been worked out with this 'Meldwijzer' that show how the decision tree works in practice.
 - I. Has an unsafe food possibly been marketed as specified in art 14 ALV ? (1) (2) (3) no action required.
 - II. Is there possibly a harmful food?
 - III. Notification to the NVWA in all cases by all types of food companies; even if food is still under own management. Company takes the necessary measures
 - IV. Have you traded the unsuitable food further, so no longer under your own management?
 - V. Are you the first responsible person in the chain in the Netherlands?
 - VI. Notification to the NVWA if the company is first responsible in the chain in the Netherlands. In addition, reporting by retail also applies in case of a private label product. Company takes the necessary measures

'Meldwijzer onveilige levensmiddelen' and the report form are available on the website of the NVWA.

The digital path is: www.nvwa.nl – eten, drinken, roken – melding onveilige levensmiddelen.

APPENDIX 3b

NOTIFICATION FORM FOR UNSAFE FEED
WWW.NVWA.NL & (if required) WWW.GMPPLUS.ORG

Since a skipper / ship owner never owns the goods and is unable to assess exactly whether there is a serious case of contamination, he cannot notify an unsafe situation without consulting his principal and / or the owner of the goods. He depends on the opinion of these parties regarding a possible report. He can, however, catch rumors and is then obliged to inform the principal or the owner of the goods immediately so that he can investigate whether an official report applies. In cases where a skipper / ship owner makes a visual observation of a food or feed unsafe situation and he is unable to inform the principal and / or owner of the goods, he is obliged to warn the relevant authorities such as the NVWA, according to the guidelines of the institution concerned.

NVWA Report form for harmful and unsuitable feed **(Only for Dutch companies!)**

Brief summary of the contents of the report form:

You can notify via the notification form on the NVWA website (see path below). If you have any further questions, please call the Customer Contact Center of the NVWA 0900 - 0388
You must provide the following information:

- details of the company making the report:
- business address
- company Name
- trade name (in case of deviation from company name)
- zip code, house number and addition
- street
- place
- country
- phone
- e-mail
- chamber of Commerce registration number
- correspondence Address
- phone number

Notification form for unsafe feed can be found on the website of the NVWA.

The digital path is: www.nvwa.nl – onderwerpen – diervoeders – melden onveilige diervoeders – formulier melden onveilige diervoeders

If GMP+ certified: GMP+ Notification form for harmful and unsuitable feed:

Since a skipper / ship owner never owns the goods and is unable to assess exactly whether there is a serious case of contamination, he cannot notify an unsafe situation without consulting his principal and / or the owner of the goods. He depends on the opinion of these parties regarding a possible report. He can, however, catch rumors and is then obliged to inform the principal or the owner of the goods immediately so that he can investigate whether an official report applies.

In cases where a skipper / ship owner makes a visual observation of a food or feed unsafe situation and he is unable to inform the principal and / or owner of the goods, he is obliged to warn the relevant authorities such as the NVWA, as well as GMP+ International according to the guidelines of the institution concerned.

You can notify via the notification form on the GMP+ International website (see path below). If you have any further questions, please call the special EWS telephone number GMP+ International (see website www.gmpplus.org)

The digital path is: www.gmpplus.org – early warning system – notification form.

Procedure

1. If you detect a (possibly) unsafe feed, please report it to GMP+ International via the notification form. GMP+ International will investigate the risk of subsequent damage in the chain.
2. How to make an EWS report?
You can use the decision tree on the left side of the page on the GMP+ website to assess whether there is a dangerous situation. Then you can use the EWS form which you can also find on the left side of the page.
3. You can notify risks and (imminent) calamities in feed via this EWS notification form. After submitting GMP+ International makes an initial estimate. If necessary, GMP+ International will contact you if a warning should be given in the chain.
4. These warnings identify the product concerned (generic name), the undesirable substance (s) and the measured value (s), as well as the country of origin. Details of the company in question are never published.
5. Even when a situation is under control, GMP+ International can still decide to publish a warning. This enables certified companies to learn from other situations, so that similar cases can be prevented in the future.

Brief summary of the contents of the report form:

- details of the company making the report:
- information about the reporting company
- nature of the irregularity
- product information
- origin of the product
- familiarity with possible sampling and / or analyzes
- communication regarding the irregularity
- relevant documentation

Feed Support Products

That was a lot of information to digest and one might ask, what is the next step? Luckily we can offer support for the GMP+ Community when doing this. We provide support by means of various tools and guidances but as each company has a shared responsibility to feed safety, and therefore tailor-made solutions cannot be offered. However, we do help by explaining requirements and provide background information about the requirements.

We have developed various supporting materials for the GMP+ Community. These include various tools, ranging from Frequently Asked Questions (FAQ) lists to webinars and events.

Supporting materials related to this document (Guidelines and FAQ's)

We have made documents available which give guidance to the GMP+ requirements as laid down in the module GMP+ FSA and GMP+ FRA. These documents give examples, answers to frequently asked questions or background information.

Find our Feed Support Products here:

Guidelines

More information: <https://gmpplus.org/en/feed-certification-scheme-2020/gmp-fsa-fra-certification/support/>

At GMP+ International, we believe everybody, no matter who they are or where they live, should have access to safe food.
